PermitIQ

The Agentic AI for Seamless Foreign Worker Permit Compliance

The Compliance Challenge for Malaysian SMEs

Malaysian SMEs face a survival-grade compliance crisis in managing foreign workers.

→ Regulations span 3+ government agencies (JTKSM, KDN, JIM) with separate portals

→ A single expired permit = RM 10,000–50,000 fines per worker + imprisonment

→ SMEs rely on spreadsheets — no system connects permits, medicals, levies

→ 13MP mandates reducing foreign workers to 10% by 2030

→ June 2026 EP salary thresholds double — no grace period

RM 50K
Max fine per worker

3 Gates
Agencies to navigate per worker

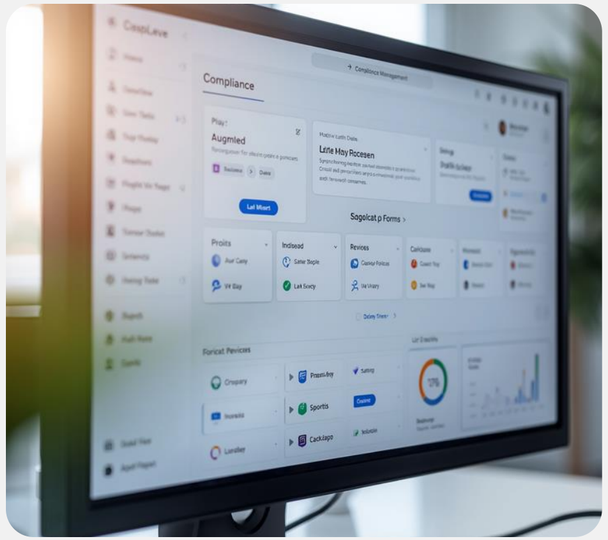
30 days
FOMEMA deadline after arival

2x levy
MLTM jump for high dependencies

Z.AI

Introducing PermitIQ

Web-based compliance platform powered by agentic AI for seamless permit management



Multimodal Triage

Upload passport, medical and demographic documents and ingest them all

Agentic AI Reasoning

LangGraph Auditor, Strategist & Filing agents

Kanban Gate Pipeline

Workers flow through gates automatically in real-time

What-If Levy Simulator

Model MTLM & salary threshold impacts

Deadlock & Expiry Detection

T-90/60/30 alerts via continuous compliance sweep

Human-in-the-Loop Safety

High-stakes decisions require explicit human approval

How Our Agentic Flow Works

1. Intelligent Intake & Triage

- **The Orchestrator**: Users interact via natural language. The Master Orchestrator instantly analyzes intent and routes the task to the correct compliance or application pipeline.
- **Data Extraction**: The Document Parser automatically ingests and extracts critical data from unstructured documents (passports, Act 446 certs, medical reports) with high-confidence OCR, eliminating manual data entry.

2. Pre-Emptive Validation & Strategy

- **Zero-Defect Checks**: Before a single form is filled, the Pre-Form Validator cross-checks data against strict Malaysian labor laws (e.g., age limits, >18 month passport validity, housing capacity, foreign-to-local ratios).
- **Strategic Planning**: The Strategist Agent forecasts future costs (Multi-Tier Levy, compounding fines) and proactively identifies "compliance deadlocks" before they trigger strict liability penalties.

3. The 3-Gate Compliance Engine

- **Gate 1 (JTKSM)**: The Company Audit Agent ensures employer readiness (Act 446 validity, quota balances, SSM status).
- **Gate 2 (KDN)**: The VDR Filing Agent manages the Visa approval pipeline.
- **Gate 3 (JIM)**: The PLKS Monitor Agent actively monitors post-arrival metrics, tracking FOMEMA medical clearances and permit expiry timelines.

4. Autonomous Assembly & Action

- **Auto-Filing:** The VDR Assembler and Contract Agent automatically generate, map, and fill standardized government forms (IMM.47/FWCMS) and employment contracts.
- **Signature Tracking:** The pipeline tracks wet-ink signatures, thumbprints, and employer M-stamps, guaranteeing no application is submitted incomplete.

5. Human-in-the-Loop (HITL) Safeguard

- **While the AI operates autonomously, the Supervisor Agent acts as an internal safeguard. If the system detects a low-confidence document read or a critical compliance violation, it immediately halts and escalates to a human manager for review—ensuring 100% control and accuracy.**
